DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 10, 12-16 and 20-25 rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for specific gas mixture and plasma, does not reasonably provide enablement for any non-specified gas mixtures. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

The specification requires striking plasma from a mixture of hydrogen and a carrier gas and than cleaning the chamber with a gas mixture in a plasma state at a parameters determined by the determining step.

The pending claims are not limited to a second gas mixture being in a plasma state. The pending claims are not limited to injecting the second gas mixture into plasma. The scope of the pending claims is not supported by the original disclosure, which requires cleaning with a second gas mixture at a plasma state. The original disclosure is enabled for the entire scope of the pending claims.

The rejection previously applied to claims 10-17 is maintained for claims 10, 12-16 and applied to newly introduced claims 20-25.

Art Unit: 1746

Claims 20-25 are further rejected because the specification is only enabled for process conditions, which maximize H atom concentration in plasma. The specification is not enabled for determining of non-specified conditions.

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 8 and 18-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 8 and 18-19 are indefinite because it is not clear what is referenced as "determining" in view of newly introduced claims 19.

Claim 8 requires a manipulative step of "determining" the parameters of the process using optical spectroscopy. Claim 19 requires specific parameters of the process.

The same deficiency is presented in claims 20-25 because claim 23 requires specific parameters.

5. Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

This claim was rejected in the previous Office action as indefinite. The applicants amended the claim to address the rejection. However, the claim still indefinite because it is not clear how the step of determining of conditions, which maximize the concentration also require determining these conditions at specific values.

Response to Arguments

6. Applicant's arguments filed 3/02/06 have been fully considered but they are not persuasive.

The applicants amended the claims and argue that the rejections under 35 USC 112, which were made in the previous Office action on merits are not longer proper.

The examiner disagrees for the reasons provided above in the rejections.

It is noted that the Declaration of Mr. Smith was considered. The examiner understands the statements made in the Declaration.

However, the scope of the statements of the Declaration are not commensurate with pending claims. It is noted that the Declaration at least at paragraph 5 clearly state that hydrogen plasma is required.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1746

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander Markoff whose telephone number is 571-272-1304. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Barr can be reached on 571-272-1414. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
